BROADBAND

**CONNECTIVITY
WITH A
REALLY BIG
SMILE.**

Broadband

**Clear and
simple
is the
Frontier
way.**

Frontier Networks is a leading provider of broadband services. We cater to national retail and single or multi-site enterprise.

We operate our own private network (AS7311) which is one of North America's leading backbones. We are known for our low latency, our high availability broadband, and our support expertise in improving retail payment transactions and access to cloud services.

We offer connection types that rival our competitors. We utilize every access type from Fibre, Copper, Coax, and Wireless. We build high availability networks with a strong emphasis for 100% coverage for all of your locations and a commitment to 100% up-time.

Direct Internet Access (DIA)

Our internet service is built to be flexible, with burstable bandwidth capabilities to scale with your business.

MPLS

Private connections between your branch or remote offices when absolute privacy & security matter the most.

SD-WAN

Frontier's Managed SD-WAN deployment is a popular choice that gives you control, greater visibility & lower overall costs.
