# Network Security

Home-worker and IT security matter today more than ever. Sadly, security firms are making unnecessary noise. Most are merely selling standard, off the shelf Unified Thread Management from proven vendors. We have a subscribable platform that provides a simple subscription-based system.

Network Security is protecting any device or information that touches your workplace network, including protecting the computers, servers, and IoT devices from outside or inside attacks.

It's critical to ensure that your sensitive data does not leave your premises without your knowledge. Our security provides a full in-depth real-time review and protection of your network and protects from the unnecessary loss of data and mitigates attacks that could leave you with locked, infected equipment.

## Unified Threat Management

- Application Control
- Homeworker VPN
- URL & WEB Filtering
- Anti Virus Control
- Virus Outbreak
- Critical Application Management
- Policy and Access Development
- ANTI SPAM
- Traditional Firewall

**SAFE & SECURE AND ALWAYS  
MONITORED**
